## **What's stopping you?**

The operational safety of your vehicle begins with the brakes. Healthy brake fluid is vital to ensure your braking system is in tip top condition. Unfortunately, brake fluid doesn't last forever and it may be time you had yours changed. Brake fluid is hygroscopic, which means it absorbs moisture from the atmosphere. In time, the moisture content builds up and can reduce the effectiveness of your braking system. It is therefore imperative that the old brake fluid is completely removed from the system and changed with new Seat original brake fluid. We recommend you have this done every two years to be sure your brakes are totally reliable.

Please talk to your Seat Service Centre today.
